

## Fixes and feature requests from first field pass

Prepared by Jordan Schiller · July 16, 2026 · 17 items · Screenshots inline with each item

Everything below came from a first working pass through the app on July 16, tested with a real lead (Nona Terrace, spec attached separately as **Nona\_Terrace\_SW\_Paint\_Specification.pdf**). Each item shows the screenshot, Jordan's original note, the problem, the fix, and a done-when. Do the Section B renames in one sweep before the Section C work.

### DECISIONS ALREADY LOCKED IN WITH JORDAN (JULY 16)

**Naming model:** a Lead converts to an Opportunity, and a won Opportunity becomes a Job. The word "project" replaces "deal" everywhere, and "Project name" is the display name that travels from the lead to the opportunity.

**Pipeline stages:** "Needs takeoff" and "Takeoff scheduled" merge into a single **Takeoff** stage (see C6). Whether the site walk is on the calendar becomes data on the lead, not a separate stage.

**Follow-up tasks:** saving a follow-up date creates a task, and the app asks who it is assigned to every time. No silent default (see C7).

| ID | ITEM                                                                 | TYPE    |
|----|----------------------------------------------------------------------|---------|
| A1 | Lead shows twice in the Pipeline                                     | Bug     |
| A2 | Contact and company picker on New Lead is broken, no duplicate check | Bug     |
| B1 | Rename Bids to Opportunities, everywhere                             | Rename  |
| B2 | Rename "deal" to "project," everywhere                               | Rename  |
| B3 | "Bid label" becomes "Project name," pre-filled from the lead         | Rename  |
| B4 | Button reads "Convert to opportunity"                                | Rename  |

Jordan: "Somehow in the pipeline one lead is showing twice. It looks like it has to do with the stage. A lead should only be able to be in one stage at a time."

**Problem.** The same lead (11095 Savannah Landing Cir, CMS Orlando, \$310k) renders as two rows, one under Needs takeoff and one under Takeoff scheduled. The header counts and dollar totals double-count it too (4 deals, \$19M). It looks like the stage is being derived from status history, or stored in more than one place, instead of living as a single field on the lead.

**Fix.** Stage must be exactly one field on the lead record. Changing stage updates that field, and the Pipeline renders one row per lead, period. Add a cleanup or migration for any records currently sitting in two stages. Note that C6 (merging the takeoff stages) removes the specific pair involved here, but fix the underlying one-stage rule regardless so this can never happen between any two stages.

**Done when:** no lead can ever appear in more than one stage, and the header counts and dollar totals match one row per lead.

## A2 BUG

### Contact and company picker on New Lead is broken and does not check for existing records

The screenshot shows a mobile app interface for creating a new lead. At the top, there's a header with an aerial photo of a property and the address "11095 Savannah Landing Cir, Orlando, FL 32832, USA". Below this, a section titled "New to Mercer" explains that a property record will be created. The form is divided into several sections: 1. Address and Units: A text field for the address and a button for "Units — add on takeoff". 2. Contact and Company Picker: A search bar with "Robert Strembecki" and a dropdown arrow, and a button for "CMS Orlando". Below this is a section for "EXISTING CONTACTS" with a button for "New contact instead". 3. "What's the work?": A section with a "SCOPE" section containing buttons for "Full exterior", "Breezeways", "Stairs", "Wood rot", and "Interior common". Below this is a "ROUGH \$" field and a "JOB SIZE" section with a toggle for "Large job ≥ 2 weeks - drives templates". 4. "WHERE'D IT COME FROM?": A section with buttons for "NAA Orlando 2026", "Repeat client", "Referral", "RFP / bid invite", "Website", "Walk-up", "Cold outreach", and "+ Other". 5. "Notes & files": A section at the bottom with an "Optional" label.

Jordan: "This contact area is all messed up, I can't see everything, and I need to know if the company and contact already exist."

**Problem.** On the "Who's it for?" card, the section header gets clipped, the Existing Contacts dropdown floats over the Company field and the card below it, and there is no way to tell whether the contact or company being typed already exists in Mercer. That is how duplicate contacts and companies get created.

**Fix.** Fix the clipping and stacking so the whole card stays visible in every state. As you type in the Contact field, show live matches (name, company, email) with a clear "already in Mercer" indicator, and selecting a match links the existing record. Do exactly the same for the Company field. If nothing matches, fall through to the inline new-contact state, which already works well and is the pattern to copy:

1

Who's it for?

Pick or add a person

CONTACT

Robert Strembicki

4073597202

robert@cmsorlando.com

COMPANY

CMS Orlando

← Search existing instead

2

What's the work?

✓ 1 in scope

SCOPE

Jordan: "Contact seems to work better when you're adding a new contact." This is the good state. Make search mode this clean.

**Done when:** nothing overlaps or clips in any state, typing an existing contact or company surfaces the match before a duplicate can be created, and selecting a match links the record instead of duplicating it.

SECTION B

Renames

These are language changes across the whole product. Do them in one sweep so nothing is left saying the old words.

B1 RENAME

Bids become Opportunities, everywhere

Bids

New bid

Items per page50

1-2 of 2 items

1 of 1 pages

Jordan: "Maybe bids should be opportunities."

**Fix.** Rename Bids to Opportunities across the product: this list page title and search placeholder, the "New bid" button (becomes "New opportunity"), nav entries, breadcrumbs, the BID labels on the Home page's Jump Back In cards, empty states, toasts, and any emails or share pages. The object model reads Lead, then Opportunity, then Job once it is won. Jobs keep their name.

**Done when:** the word "bid" no longer appears anywhere in the UI.

## B2 RENAME

### "Deal" becomes "project," everywhere

NEW BID • CONFIRM & LAUNCH

**Straight from the lead.**  
The building came over with the lead. Confirm the deal, then let the quote draft itself.

not it? search again

**11095 Savannah Landing Cir**  
11095 Savannah Landing Cir, Orlando, FL 32832, USA

**Started from a lead**  
Creating this bid moves the lead to quoted — the pipeline stays honest.

11095 Savannah Landing Cir, Orlando, FL 32832, USA Units — add on takeoff

**1 The deal** Confirm the basics

CLIENT

JOB SIZE — sets the billing plan & templates. You can change it later.

☐ Small job  
Days, one crew  
Deposit + final invoice

☒ Large job  
≥ 2 weeks, phased  
Draw billing on milestones

THIS BID 11095 Savannah Landing Cir CMS Orlando large job - draw billing on milestones

**Create & draft quote with AI**  
Scope + photos → priced lines in ~60s

Opens the quote engine — add scope and photos, the AI prices them in ~60s.

OR Create an empty bid — I'll price it by hand

Jordan: "I don't like the word 'deal,' too hard. Should be called the project."

**Fix.** Replace every instance of "deal" with "project": the "The deal" card header in this convert flow (becomes "The project"), the Pipeline subtitle (becomes "Every open project, first contact to signed"), the DEAL column header, the "4 deals • \$19M in open quotes" counter, and anywhere else the word shows up in copy.

**Done when:** a search for "deal" in UI strings returns nothing.

### B3 RENAME

## "Bid label" becomes "Project name" and comes from the lead

The screenshot shows a form titled "1 The deal" with a "Confirm the basics" link. The form is divided into three sections: CLIENT, BID LABEL, and JOB SIZE. The CLIENT section has a text input field containing "CMS Orlando" and a note: "New client — we'll save it to the property record when the bid is created." The BID LABEL section has a text input field containing "11095 Savannah Landing Cir – Full Exterior Repaint". The JOB SIZE section has two radio button options: "Small job" and "Large job". The "Large job" option is selected. Below each radio button are two sub-options: "Days, one crew" and "Deposit + final invoice" for "Small job"; and "≥ 2 weeks, phased" and "Draw billing on milestones" for "Large job".

*Jordan: "Bid label should be called Project name and should come from lead project name."*

**Fix.** Rename the BID LABEL field to PROJECT NAME. When converting a lead, it pre-fills with the lead's Project name (see C2) instead of the auto-built address-plus-scope string it shows today, and it stays editable. This is the same field the lead carries, flowing through, not a second name.

**Done when:** converting the Nona Terrace lead lands here with PROJECT NAME already reading "Nona Terrace."

**B4** RENAME

## Button reads "Convert to opportunity"

The screenshot displays a user interface for managing a pipeline. It features a 'Pipeline status' section with a dropdown menu currently showing 'Needs takeoff' and a 'Save status' button. Below this is a 'Schedule the takeoff' section, which includes a text input field and a 'Schedule takeoff' button. To the right of the 'Pipeline status' section, there is an orange button labeled 'Create bid from lead'.

Jordan: "This button should just be Convert to Opportunity."

**Fix.** Rename the "Create bid from lead" button to "Convert to opportunity." Same action, same placement. Update the confirmation copy in the flow to convert language too (for example, "Converting moves the lead to quoted, the pipeline stays honest").

**Done when:** the button and all copy in that flow use convert-to-opportunity language.

## SECTION C

# Lead record and UX fixes

C2 through C5 are all symptoms of the same missing thing: the lead has no proper name field, so the address-plus-scope string is being reused as the title and even stored where the contact's name belongs. C2 is the root fix.

### C1 UX

## Leads and Opportunities in the left nav, opening list views

Jordan: "I need Leads and Opportunities in my navbar that takes me to list views of leads and opportunities."

**Fix.** Add two nav items, each opening a list view. Suggested order: Home, Pipeline, Leads, Opportunities, Jobs, Properties, Contacts, Reports. Opportunities is the renamed Bids list from B1, which already exists. Leads needs a real list view of its own, since leads are currently only reachable through the Pipeline: columns roughly Project name, Company, Contact, Property, Stage, Value, Age, Next, with the same search, filter, sort, and pagination treatment the Bids list already has.

**Done when:** both entries are in the nav and open working, searchable list views.

## Project name field on the New Lead form

Leads > New

NEW LEAD • THE FRONT DOOR

**One building, twenty seconds.**  
The building's pinned. Add who it's for and what the work is — that's the whole lead.

Browse

Jordan: "I need to be able to name the lead or opportunity right away. This is separate than the property address, name, or company name. It's a quick synopsis of what the lead is."

**Fix.** Add a required PROJECT NAME field near the top of the New Lead form. It is the quick synopsis of what the lead is (for example, "Nona Terrace"), independent of the property address and the company. This becomes the record's display name everywhere: pipeline rows, list views, Jump Back In cards, page titles, and it flows into the opportunity on convert (B3). Suggesting a default from the property name is fine, but it must always be editable.

**Done when:** a lead cannot be saved without a project name, and that name is what shows everywhere afterward.

## Lead page title shows the Project name

---

Source: Sherwin Williams

**Property address**

Resolved via Google Places from the property and management company. This is the property this contact manages.

11095 Savannah Landing Cir, Orlando, FL 32832, USA

*Jordan: "Need first name, last name, and account info here as well."*

**Fix.** The Contact card on the lead detail page only shows an email and a phone number. Add the contact's first and last name, and show the company or account the contact belongs to, linked to that company record. Keep Source where it is.

**Done when:** this card reads Robert Strembicki, CMS Orlando, then the email, phone, and source.

## Restructure the Edit Lead form

Jordan: "On edit view of lead this information seems incorrect. Contact should be first, last, email, phone of contact. Property should be name and property address. Then an account or company section should also be associated with the lead."

**Problem.** The project title string is sitting inside the Contact section's Name field, and Company is buried inside the Property section. The data model is bleeding into the form.

**Fix.** Restructure into four sections. **Project:** project name (the C2 field). **Contact:** first name, last name, email, phone. **Property:** property name and property address. **Company / Account:** the management company associated with the lead. Notes stays as is.

**Done when:** editing this lead shows Robert and Strembicki under Contact, CMS Orlando in its own Company section, and the project name in its own field, with each edit saving to the right record.

## Merge the two takeoff statuses into one Takeoff stage

Nona Terrace SW Paint Specification.pdf 1.8 MB Remove

Choose Files No file chosen Caption (optional) Upload

Jordan: "Let's remove the Needs takeoff status and just put takeoff schedule... we just need to think through those two statuses a little more." Decided with Jordan on July 16: merge them into a single stage.

**Fix.** Replace "Needs takeoff" and "Takeoff scheduled" with one stage: **Takeoff**. New leads default to it. Whether the site walk is on the calendar is data on the lead (the existing Schedule The Takeoff card), shown on the pipeline row as "Not scheduled" or the date and time, but it is not a separate stage. The status list becomes: Takeoff, Quote sent, Won, Lost, No response, On hold, Expired. Update the Pipeline stage tabs to match, and while in there, make the tab names identical to the status names (today the tabs say Quoting and Sent while the dropdown says Quote sent). Migrate any lead sitting in either old status into Takeoff.

**Done when:** one Takeoff tab exists with a visible scheduled or not-scheduled state on each row, the dropdown and tabs use identical names, and no lead is stranded in a retired status.

## Outreach: real timestamps, and follow-ups create tasks

The screenshot shows a web form with two main sections. The first section, titled 'Property address', contains a description: 'Resolved via Google Places from the property and management company. This is the property this contact manages.' Below this is the address '11095 Savannah Landing Cir, Orlando, FL 32832, USA' and a button labeled 'Re-run enrichment'. The second section, titled 'Outreach', has a description: 'Track when you last reached out and when to circle back.' It includes a 'Last contacted' field with the value 'Just now (2 attempts)' and a 'Log contact attempt' button. Below this is a 'Follow-up date' field with the value '09/16/2026' and a calendar icon, followed by a 'Save' button. At the bottom of the 'Follow-up date' field, it says 'Due Sep 16, 2026'.

Jordan: "Property address is fine. Outreach should stamp the date and time that button is clicked, and follow-up date should create a task for a user."

**Fix, part one.** "Log contact attempt" stamps the exact date and time of the click and displays it (for example, "Jul 16, 2026, 2:41 PM"), instead of only "Just now." Keep the attempts count, and ideally keep a small history of attempts with their timestamps so we can see the cadence.

**Fix, part two.** Saving a follow-up date creates a task. Show a small assignee picker on save, asking who the task is for every time, with no silent default (Jordan's call). The task should read something like "Follow up: Nona Terrace (Robert Strembecki)," be due on that date, and surface in Needs You Today and notifications for the assigned user. The Property address card above this section is fine as is, no changes there.

**Done when:** every logged attempt has a visible date and time, and saving a follow-up date asks who it is for and creates a task that user actually sees when it comes due.

## Upload multiple files on a lead

**3 Notes & files** Optional

 **Nona Terrace SW Paint Specification.pdf** Browse  
PDF, images, or forward the email. Attached to the lead from day one.

Anything worth remembering — access notes, who referred it, the deadline...

---

**THIS LEAD**  
**11095 Savannah Landing Cir** · add a contact · Full exterior

 Add & schedule takeoff ✓ Add lead

*Jordan: "I need to be able to upload more than one file, for example the paint spec and scope of work and maybe some photos."*

**Fix.** The Notes & Files dropzone on New Lead accepts a single file. Accept multiple: multi-select in the browse dialog, dragging several at once, and a list of attached files with per-file remove before saving. Apply the same behavior to the Files card on the lead detail page. All attached files ride along to the opportunity on convert.

**Done when:** a paint spec, a scope of work, and a handful of photos can be attached in one pass on either surface.

SECTION D

# New features: AI intake

D1 and D2 share the same extraction engine. The attached Nona Terrace spec is the acceptance test for both. AI output always lands as an editable draft for review, never a silent save.

D1 FEATURE

## Create a lead from an uploaded spec or email

Jordan: "Ideally on the homepage I could upload a spec and screenshot of the email and have it create the lead for me."

**Build.** Let the "Ask Mercer to do anything" box on Home accept file drops (PDFs and images). When a spec or a screenshot of an email comes in, AI extracts the lead and opens the New Lead form pre-filled for review: project name, property name and address, contact first and last name, phone, email, management company, scope, and source. Nothing saves until Jordan confirms. Extracted contacts and companies run through the A2 duplicate check so existing records get linked, not recreated, and the uploaded files attach to the lead automatically (C8).

**Acceptance test.** Dropping the attached Sherwin-Williams spec (Nona\_Terrace\_SW\_Paint\_Specification.pdf) should produce this draft:

|              |                                                                 |
|--------------|-----------------------------------------------------------------|
| Project name | Nona Terrace                                                    |
| Property     | Nona Terrace, 11095 Savannah Landing Circle, Orlando, FL 32832  |
| Contact      | Robert Strembecki (LCAM)                                        |
| Phone        | 407-359-7202                                                    |
| Email        | robert@cmsorlando.com                                           |
| Company      | Community Management Specialist (CMS Orlando)                   |
| Source       | Sherwin-Williams (spec prepared by Ruthie Dichamp)              |
| Scope        | Full exterior repaint: townhomes, clubhouse, and perimeter wall |

**Done when:** dropping that PDF on the homepage yields a draft lead with those fields filled, the spec attached, and a confirm step before anything is saved.

## D2 FEATURE

### Read an uploaded scope of work and set the scope for us

Jordan: "This is good. Would also be nice to upload a scope of work if it's given to us and have AI decipher the needs for us."

**Build.** The "What's the work?" card works well. Add an upload affordance on it: drop a scope of work or spec and AI deciphers the needs. It pre-selects the matching scope chips (the Nona Terrace spec would tick Full exterior), and drops a short summary of the specifics into notes. For this spec that summary would flag stucco crack repair, rusted corner bead replacement, shutters, entry and garage doors, the Loxon primer plus Latitude finish system, and the instruction to omit factory-finished soffit, fascia, and gutters unless the HOA directs otherwise. Everything stays editable before save, and this shares the same extraction engine as D1.

**Done when:** uploading a spec here fills the scope section instead of someone reading sixteen pages to do it by hand.

# Backlog: direction on the record

No work needed now. Written down so we build toward it instead of around it.

E1 LATER

## Retire pricing by hand

Jordan: "This is fine for now, but at some point we should never allow price by hand."

**Direction.** The "Create an empty bid, I'll price it by hand" escape hatch stays for now. Long term, every price runs through the quote engine so pricing stays consistent and defensible. Plan to demote and eventually remove the by-hand path once AI pricing is trusted, and in the meantime, do not build anything new on top of manual pricing.
